BATHYMETRIC SURVEY - MULTIBEAM AND SINGLE BEAM

Coordinated in OSGB36 using OSTN15.
Depths below Chart Datum (CD) in metres.
CD taken as 3.05 metres below Ordnance Datum Newlyn (ODN).
RTK GNSS, tidal and IMU data post-processed using PosPAC MMS.
Soundings sorted at 8 metre intervals using IHO rounding rules.
Contours at 1 metre intervals.
Survey coverage is not 100%.
Bed mounted obstructions are not certainly detected.
Soundings in red are above dredge depth of 8.0 metres
— — Dredge extents

SIDE SCAN SONAR SURVEY (SEE NOTE ->)

Dimensions are approximate.
Sub-seabed obstructions are not detected.
Side scan sonar survey line spacing: 30 metres
Side scan sonar operated at 325 kHz, 50 metre range.
55 Object with ID number (top) & height metre relative to seabed.
0.6 Please see target list for more information (J2095 Contacts.xls).
— Limit of side scan sonar survey.

Multibeam side scan sonar (backscatter) has been used to interpret seabed mounted contacts within: Inner Harbour, T1, T2, T3, T4, T5, Fish Dock, Soldiers Quay, Holyhead Marina, Orthios Jetty.

Contacts have not been specifically interpreted for other areas where multibeam side scan sonar has taken place as these will be present within the multibeam sounding data.

Side scan sonar surveys (with single beam soundings) were executed within Areas 4, 5, & 6 and as such all contacts have been interpreted for these locations.
